## **Continuous-Time Signals and Systems - dummies**

We are interested in both continuous-time and discrete-time systems. A continuous-time system is one in which continuous-time input signals are transformed into continuous-time output signals. Such a system is represented pictorially as shown in Figure 2.1.1(a), where  $x(t)$  is the input, and  $y(t)$  is the output.

Continuous-Time Signals: Discrete-Time Signals: A Continuous-Time Signal is defined for all values of time.  $X$  is the dependent variable and  $t$  is the independent variable. When there is an  $X(t)$  for every single value of  $t$ , it is continuous. Discrete-Time Signals are defined only at certain discrete values referred to as  $n$  and denoted in square brackets.

## Overview of Signals and Systems - Types and differences

Continuous system Continuous systems are those types of systems in which input and output signals are the same at both the ends. In this type of system, variable changes with time and any type of variation is not found in the input and output signal. In response to the input signal, a continuous system generates an output signal.

A signal is said to be a continuous-time signal if it is defined for all time  $t$ , a real number. Continuous-time signals arise naturally when a physical signal, such as a light wave, is converted by a transducer, such as a photoelectric cell, into an electrical signal.

The continuous-time signal is also termed as analog signal. It is a continuous function of time defined on the real line (or axis)  $R$ . It has continuous amplitude and time. That is, the continuous-time signals will have certain value at any instant of time. The continuous-time signal is drawn as shown in Figure 1. The examples for continuous-time signals are sine waves, cosine waves, triangular waves, and so on.

The operation of continuous time circular convolution is defined such that it performs this function for finite length and periodic continuous time signals. In each case, the output of the system is the convolution or circular convolution of the input signal with the unit impulse response.
