Principles Of Health Interoperability HL7

The third edition of Principles of Health Interoperability includes a new part on FHIR (Fast Health Interoperability Resources), the most important new health interoperability standard for a generation. FHIR combines the best features of HL7's v2, v3 and CDA while leveraging the latest web standards and a tight focus on implementability.

Principles of Health Interoperability: SNOMED CT, HL7 and ...

Health Level 7 (HL7) and SNOMED CT are two of the key international standards, which underpin efforts to improve health care interoperability. HL7 provides the structure, rather like English grammar, while SNOMED CT provides words that computers can understand.

Joined-up healthcare depends on standards. The two leading standards are the SNOMED CT, which is a clinical terminology (semantics) and HL7 Version 3, which is a specialised healthcare interoperability language (syntax). Both are new, complex and fit for purpose. Tim Benson believes there is an unmet need for a book on Healthcare Integration.

KEYWORDS: HL7, CDA, OpenEMR, EMR, System Integration. I. INTRODUCTION The OpenEMR approach to modelling information, services and domain knowledge is based on a number of design principles, described below. All of these principles lead to a separation of the models of the OpenEMR architecture, and consequently, a high level of componentization.
